

JOBSHEET PRAKTIKUM

Mata Kuliah: Pemrograman Web Lanjut

Pertemuan 7 – Implementasi Wizard Form (Multi Step Form) di Filament

Capaian Pembelajaran

Setelah mengikuti praktikum ini, mahasiswa mampu:

1. Membuat Resource Product
2. Menggunakan Wizard Form pada Filament
3. Membagi form menjadi beberapa langkah (step)
4. Menambahkan validasi pada setiap step
5. Mengatur tombol submit pada Wizard
6. Menampilkan data Product pada tabel

Framework yang digunakan:

Filament

A. Studi Kasus

Dalam sistem e-commerce, form produk biasanya panjang dan kompleks.

Agar lebih user-friendly, form dibagi menjadi beberapa tahap:

- Product Info
- Pricing & Stock
- Media & Status

Teknik ini disebut Wizard Form (Multi Step Form).

B. Struktur Database Product

Contoh struktur tabel products:

Field	Tipe
name	string
sku	string
description	text
price	integer
stock	integer

Field	Type
image	string
is_active	boolean
is_featured	boolean

Pastikan model Product sudah dibuat.

Buat file migrate :

- php artisan make:migration create_products_table

buka file migrate product tadi dan tambahkan code berikut

```
PraktikumPWL > database > migrations > 2026_03_01_143404_create_products_table.php
3 use Illuminate\Database\Migrations\Migration;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Support\Facades\Schema;
6
7 return new class extends Migration
8 {
9     /**
10      * Run the migrations.
11      */
12     public function up(): void
13     {
14         Schema::create('products', function (Blueprint $table) {
15             $table->id();
16             $table->string('name');
17             $table->string('sku')->unique(); // Tambahkan unique agar tidak ada SKU ganda
18             $table->text('description');
19             $table->integer('price');
20             $table->integer('stock');
21             $table->string('image')->nullable(); // nullable agar boleh kosong di awal
22             $table->boolean('is_active')->default(true);
23             $table->boolean('is_featured')->default(false);
24             $table->timestamps();
25         });
26     }
27
28     /**
29      * Reverse the migrations.
30      */
31     public function down(): void
32     {
33         Schema::dropIfExists('products');
```

Jalankan migrasi

- php artisan migrate

cek di database

Server: localhost:3306 » Database: filament2026 » Table: products										
Browse Structure SQL Search Insert Export Import Privileges Operations Triggers										
Table structure Relation view										
#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action	
☐	1 id	bigint		UNSIGNED	No	None		AUTO_INCREMENT		Drop More
☐	2 name	varchar(255)	utf8mb4_unicode_ci		No	None				Drop More
☐	3 sku	varchar(255)	utf8mb4_unicode_ci		No	None				Drop More
☐	4 description	text	utf8mb4_unicode_ci		No	None				Drop More
☐	5 price	int			No	None				Drop More
☐	6 stock	int			No	None				Drop More
☐	7 image	varchar(255)	utf8mb4_unicode_ci		Yes	NULL				Drop More
☐	8 is_active	tinyint(1)			No	1				Drop More
☐	9 is_featured	tinyint(1)			No	0				Drop More
☐	10 created_at	timestamp			Yes	NULL				Drop More
☐	11 updated_at	timestamp			Yes	NULL				Drop More

Setelah migrate berhasil maka langkah berikutnya membuat model

1. Buat File Model
 - php artisan make:model Product
2. Isi File Model

```
PraktikumPWL > app > Models > Product.php
1  <?php
2
3  namespace App\Models;
4
5  use Illuminate\Database\Eloquent\Factories\HasFactory;
6  use Illuminate\Database\Eloquent\Model;
7
8  class Product extends Model
9  {
10     use HasFactory;
11
12     /**
13      * Kolom yang boleh diisi secara massal.
14      * Sesuaikan dengan field di migrasi tadi.
15      */
16     protected $fillable = [
17         'name',
18         'sku',
19         'description',
20         'price',
21         'stock',
22         'image',
23         'is_active',
24         'is_featured',
25     ];
26
27     /**
28      * Casting tipe data (Opsional tapi disarankan)
29      * Agar Laravel otomatis mengubah string dari DB menjadi tipe data yang benar.
30      */
31     protected $casts = [
32         'is_active' => 'boolean',
33         'is_featured' => 'boolean',
34         'price' => 'integer',
35         'stock' => 'integer',
36     ];
37 }
```

📌 C. Membuat Resource Product

Jalankan:

- **php artisan make:filament-resource Product**

Isi:

- Attribute → name
- Generate view page → Yes
- Generate dari database → No

```
PS C:\laragon\www\PraktikumPWL> php artisan make:filament-resource Product

The "title attribute" is used to label each record in the UI.

You can leave this blank if records do not have a title.

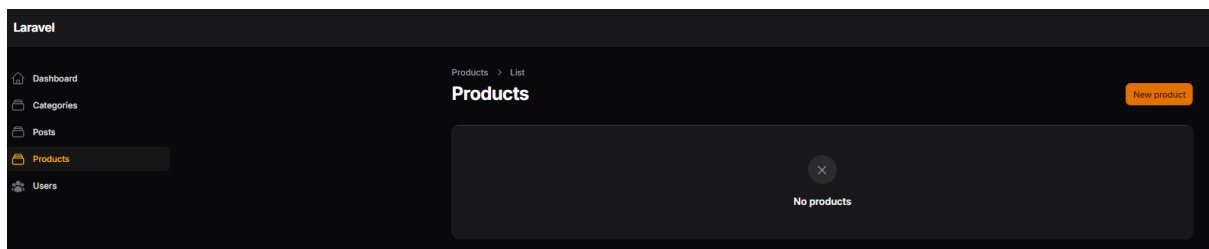

What is the title attribute for this model?
> name

Would you like to generate a read-only view page for the resource? (yes/no) [no]
> yes

Should the configuration be generated from the current database columns? (yes/no) [no]
> no

INFO Filament resource [App\Filament\Admin\Resources\Products\ProductResource] created successfully.
```

Refresh /admin → menu Products muncul.

📌 D. Implementasi Wizard Form

Buka file:

- **ProductForm.php**

◆ 1 Step 1 – Product Info

```
Wizard::make([
    Step::make('Product Info')
        ->description('Isi informasi dasar produk')
        ->schema([
            Group::make([
                TextInput::make('name')->required(),
```

```
        TextInput::make('sku')->required(),
    ]->columns(2),
```

```
        MarkdownEditor::make('description')
            ->columnSpanFull(),
    ]),
```

PraktikumPWL > app > Filament > Admin > Resources > Products > Schemas >  ProductForm.php

```
1  <?php
2
3  namespace App\Filament\Admin\Resources\Products\Schemas;
4
5  use Filament\Schemas\Schema;
6  use Filament\Schemas\Components\Wizard;
7  use Filament\Schemas\Components\Wizard\Step;
8  use Filament\Schemas\Components\Group;
9  use Filament\Forms\Components\MarkdownEditor;
10 use Filament\Forms\Components\TextInput;
11
12 class ProductForm
13 {
14     public static function configure(Schema $schema): Schema
15     {
16         return $schema
17             ->components([
18                 Wizard::make([
19                     Step::make('Product Info')
20                         ->description('Isi Informasi Produk')
21                         ->schema([
22                             Group::make([
23                                 TextInput::make('name')
24                                     ->required(),
25                                 TextInput::make('sku')
26                                     ->required(),
27                             ])->columns(2),
28                             MarkdownEditor::make('description')
29                         ]),
30                 ]),
31             ->columnSpanFull(),
32         ]);
33     }
34 }
35
36
```

Hasil:

- Name & SKU dalam 2 kolom
- Description full width

Products > Create

Create Product

Product Info
 Isi Informasi Produk

02 Product Price and Stock
 Isi Harga Produk

Price*

Stock*

Description

B *I* U H1

◆ **3** Step 3 – Media & Status

Step::make('Media & Status')

->description('Upload gambar dan atur status')

->schema([

 FileUpload::make('image')

 ->disk('public')

 ->directory('products'),

 Checkbox::make('is_active'),

 Checkbox::make('is_featured'),

]),

])

PraktikumPWL > app > Filament > Admin > Resources > Products > Schemas > ProductForm.php

```
6 use Filament\Schemas\Components\Wizard;
7 use Filament\Schemas\Components\Wizard\Step;
8 use Filament\Schemas\Components\Group;
9 use Filament\Forms\Components\MarkdownEditor;
10 use Filament\Forms\Components\TextInput;
11 use Filament\Forms\Components\FileUpload;
12 use Filament\Forms\Components\Checkbox;
13
14
15 class ProductForm
16 {
17     public static function configure(Schema $schema): Schema
18     {
19         return $schema
20             ->components([
21                 Wizard::make([
22                     // Step::make('Product Details')
23                     Step::make('Product Info') ...
24                     // Step::make('Product prices')
25                     Step::make('Product Price and Stock') ...
26                     // Step::make('Media')
27                     Step::make('Media and status')
28                         ->description('Isi Gambar Produk')
29                         ->schema([
30                             FileUpload::make('image')
31                                 ->disk('public')
32                                 ->directory('products'),
33                             Checkbox::make('is_active'),
34                             Checkbox::make('is_featured'),
35                         ]),
36                 ]),
37             ->columnSpanFull(),
38         ];
39     }
40 }
```

E. Menambahkan Tombol Submit

Tambahkan **method submit** action:

```
->submitAction(
    Action::make('save')
        ->label('Save Product')
        ->color('primary')
        ->submit('save')
)
```

```
8 use Filament\Schemas\Components\Group;
9 use Filament\Forms\Components\MarkdownEditor;
10 use Filament\Forms\Components\TextInput;
11 use Filament\Forms\Components\FileUpload;
12 use Filament\Forms\Components\Checkbox;
13 use Filament\Actions\Action;
14
15 class ProductForm
16 {
17     public static function configure(Schema $schema): Schema
18     {
19         return $schema
20             ->components([
21                 Wizard::make([
22                     // Step::make('Product Details')
23                     Step::make('Product Info')...
24                     // Step::make('Product prices')
25                     Step::make('Product Price and Stock')...
26                     // Step::make(media)
27                     Step::make('Media and status')...
28                 ])
29             ->columnSpanFull()
30             ->submitAction(
31                 Action::make('save')
32                     ->label('Save Product')
33                     ->button()
34                     ->color('primary')
35                     ->submit('save')
36             )
37         );
38     }
39 }
```

Products > Create

Create Product

☒ **Product Info**
Isi Informasi Produk

☒ **Product Price and Stock**

📌 F. Menghilangkan Default Button

Buka file: **CreateProduct.php**

- Override method:
- protected function getFormActions(): array
 - {
 - return [];
 - }

PraktikumPWL > app > Filament > Admin > Resources > Products > Pages > 🐘 CreateProduct.php

```
1  <?php
2
3  namespace App\Filament\Admin\Resources\Products\Pages;
4
5  use App\Filament\Admin\Resources\Products\ProductResource;
6  use Filament\Resources\Pages\CreateRecord;
7
8  class CreateProduct extends CreateRecord
9  {
10     protected static string $resource = ProductResource::class;
11
12     protected function getFormActions(): array
13     {
14         return [];
15     }
16
17 }
18
```

G. Tampilan Wizard Form

Form Builder

The image shows a dark-themed user interface for a checkout process. At the top, there are three steps: 'Order' (with a thumbs-up icon), 'Delivery' (with a thumbs-up icon), and 'Billing' (with a credit card icon). The 'Order' step is currently active. Below the steps, there is a form area. At the top right of the form is a trash icon. The form contains two main sections: 'Product' and 'Quantity'. The 'Product' section has a dropdown menu showing 'Filament t-shirt'. The 'Quantity' section has a text input field containing the number '3'. Below these sections is an 'Add to order' button. Further down is a 'Special order notes' section with a large text area. At the bottom left of the form is a 'Back' button.

📌 H. Menambahkan Validasi per Step

Contoh:

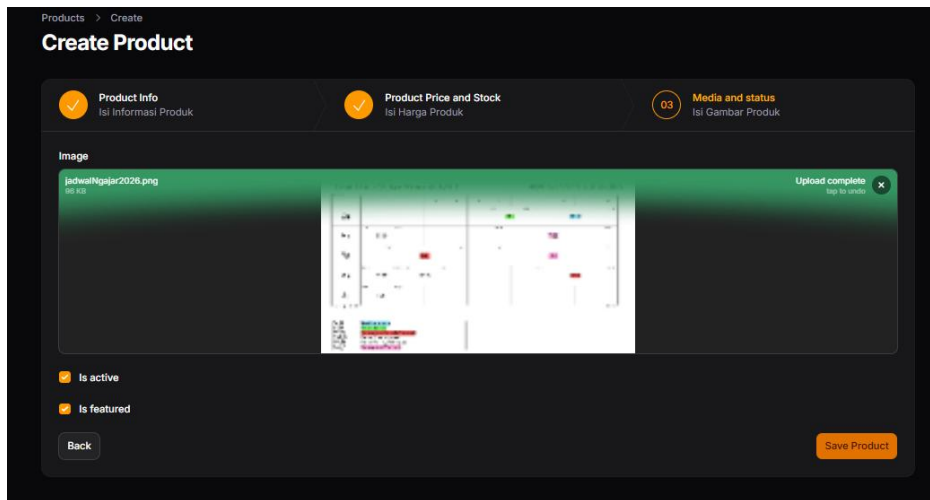

- `TextInput::make('name')`
 `->required(),`
- `TextInput::make('price')`
 `->numeric()`
 `->required(),`

Jika ingin melewati validasi:

- `->skippable()`

📌 I. Menampilkan Data pada Table

Isikan data terlebih dahulu :

Cek pada database

Server: localhost:3306 » Database: filament2026 » Table: products

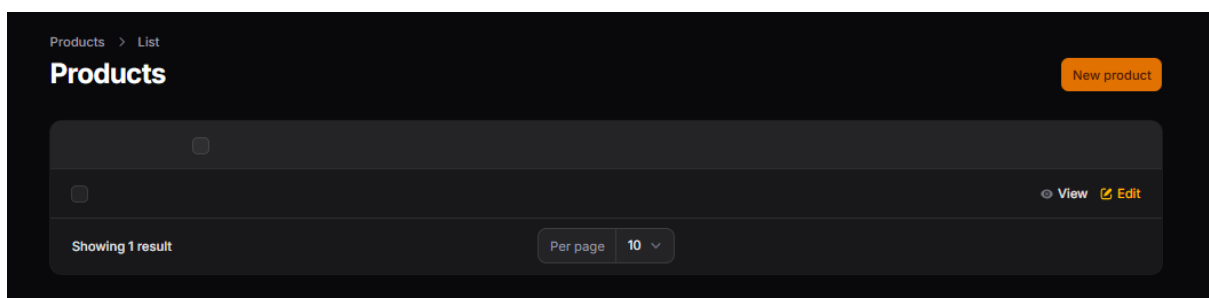

Showing rows 0 - 0 (1 total, Query took 0.0004 seconds)

SELECT * FROM `products`

Number of rows: 25 Filter rows: Search this table

	id	name	sku	description	price	stock	image	is_active	is_featured	created_at	updated_at
☐	1	Buku	B-01	buku web	100000	1	products/01KJN173Y6TGS33RS6HMH8FA1Q.png	1	1	2026-03-01 15:45:34	2026-03-01 15:45:34

Pada halaman awal

Cara menampilkan datanya buka:

- ProductsTable.php

Tambahkan:

- TextColumn::make('name'),
TextColumn::make('sku'),
TextColumn::make('price'),
TextColumn::make('stock'),

ImageColumn::make('image')
->disk('public'),

```
1  <?php
2
3  namespace App\Filament\Admin\Resources\Products\Tables;
4
5  use Filament\Actions\BulkActionGroup;
6  use Filament\Actions\DeleteBulkAction;
7  use Filament\Actions\EditAction;
8  use Filament\Actions\ViewAction;
9  use Filament\Tables\Table;
10 use Filament\Tables\Columns\ImageColumn;
11 use Filament\Tables\Columns\TextColumn;
12
13 class ProductsTable
14 {
15     public static function configure(Table $table): Table
16     {
17         return $table
18             ->columns([
19                 //
20                 TextColumn::make('name'),
21                 TextColumn::make('sku'),
22                 TextColumn::make('price'),
23                 TextColumn::make('stock'),
24                 ImageColumn::make('image')
25                     ->disk('public'),
26             ])
27             ->filters([
28                 //
29             ])
30             ->recordActions([
31                 ViewAction::make(),
32                 EditAction::make(),
33             ])
34             ->toolbarActions([
35                 BulkActionGroup::make([
36                     DeleteBulkAction::make(),
37                 ]),
38             ]);
39     }
40 }
41
```

Id	Order items	Number	Customer	Status	Total price
1		OR313795		delivered	1921.18
2		OR86739	Ona Koepp	shipped	699.88
3		OR154600	Prof. Loma Kunze	new	1922.73
4		OR134719	Ms. Cynthia Hilpert	new	1674.45

J. Pengujian

1. Buat produk baru
2. Isi Step 1 → klik Next
3. Isi Step 2 → klik Next
4. Upload gambar di Step 3
5. Klik Save Product

Cek:

- Data tersimpan di database
- Gambar tersimpan di storage/app/public/products
- Data tampil di tabel

K. Hasil yang Diharapkan

Mahasiswa berhasil:

- ☒ Membuat Multi Step Form
- ☒ Mengatur layout dalam setiap Step
- ☒ Menambahkan validasi
- ☒ Menampilkan data pada tabel
- ☒ Mengupload dan menampilkan gambar

L. Analisis & Diskusi

1. Mengapa Wizard Form lebih baik untuk form panjang?
2. Kapan kita menggunakan `skippable()`?
3. Apa kelebihan multi step dibanding single form panjang?
4. Apakah wizard cocok untuk semua jenis form?

M. Tugas Praktikum

1. Tambahkan icon pada setiap Step
2. Tambahkan validasi minimal harga > 0
3. Tambahkan badge kolom untuk status aktif di tabel
4. Buat minimal 3 produk

5. Screenshot:

- Wizard Step 1
- Wizard Step 2
- Wizard Step 3
- Tabel Product

N. Kesimpulan

Pada pertemuan ini mahasiswa telah mempelajari:

- Konsep Wizard Form
- Pembagian form menjadi beberapa step
- Validasi dalam Wizard
- Custom submit action
- Implementasi tabel Product
