

JOBSHEET PRAKTIKUM

Mata Kuliah: Pemrograman Web Lanjut

Pertemuan 2 – Membuat CRUD Resource dengan Filament v4

Capaian Pembelajaran

Setelah mengikuti praktikum ini, mahasiswa mampu:

1. Memahami konsep Resource pada Filament
 2. Membuat CRUD (Create, Read, Update, Delete) menggunakan perintah artisan
 3. Mengelola Form Builder pada Filament
 4. Mengelola Table Builder pada Filament
 5. Mengubah ikon menu resource
-

A. Review Singkat Pertemuan 1

Pada pertemuan sebelumnya kita telah:

- Menginstall Laravel 12
- Menginstall Filament v4
- Membuat user admin
- Mengakses panel /admin

Pada pertemuan ini kita akan membuat CRUD User menggunakan fitur Resource Filament.

B. Konsep Resource di Filament

Resource pada Filament adalah fitur untuk membuat halaman CRUD secara otomatis berbasis Model Laravel.

Saat menjalankan perintah:

- **php artisan make:filament-resource User**

Filament akan otomatis membuat:

- File Resource utama
- Halaman List
- Halaman Create
- Halaman Edit
- File Form Schema

- File Table Schema
-

✦ C. Langkah Praktikum

♦ Langkah 1 – Melihat Daftar Perintah Filament

Jalankan:

- **php artisan list**

Perhatikan bahwa terdapat perintah baru seperti:

- **make:filament-resource**
 - **make:filament-user**
 - **filament:install**
-

♦ Langkah 2 – Membuat Resource User

Karena Laravel sudah memiliki model User, kita langsung buat resource:

- **php artisan make:filament-resource User**

Isikan saat diminta:

- **Attribute utama → name**
- **Generate read-only page → No**
- **Generate dari database → No**

```
PS C:\laragon\www\PraktikumPWL> php artisan make:filament-resource User

The "title attribute" is used to label each record in the UI.
You can leave this blank if records do not have a title.

What is the title attribute for this model?
> name

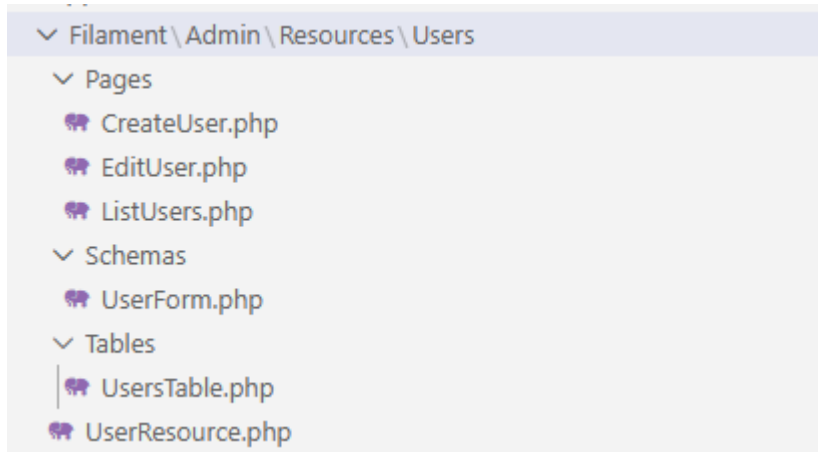

Would you like to generate a read-only view page for the resource? (yes/no) [no]
> no

Should the configuration be generated from the current database columns? (yes/no) [no]
> no

[INFO] Filament resource [App\Filament\Admin\Resources\Users\UserResource] created successfully.
PS C:\laragon\www\PraktikumPWL>
```

♦ Struktur Folder yang Terbentuk

Setelah berhasil, akan muncul struktur berikut:

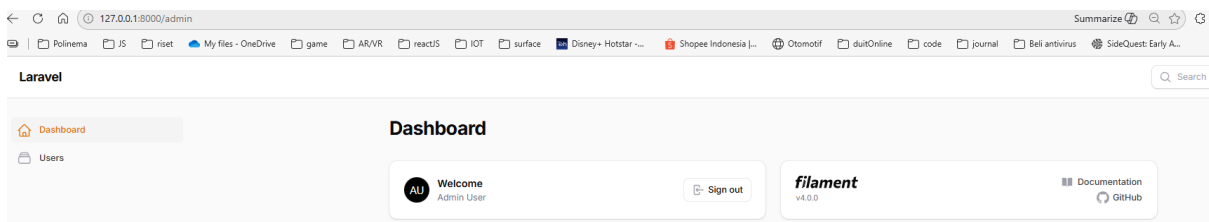

◆ Langkah 3 – Menjalankan Aplikasi

- Php artisan serve

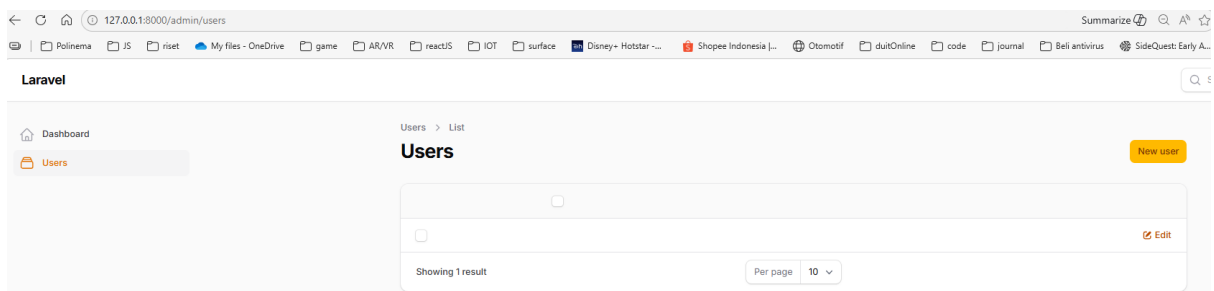

Login ke:

- <http://localhost:8000/admin>

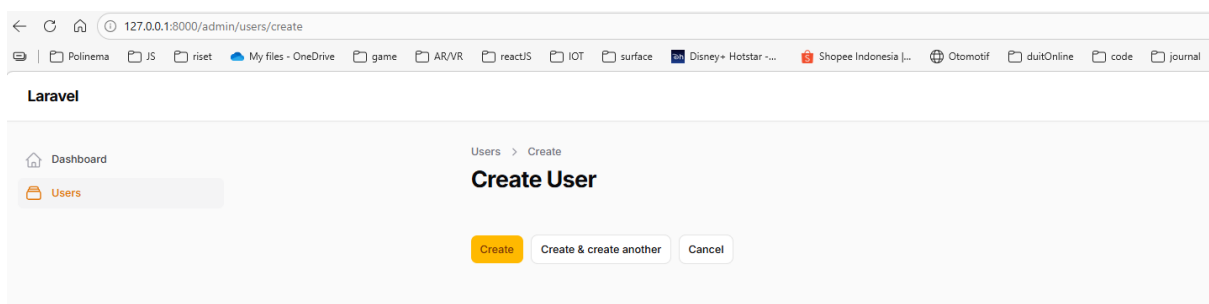

Sekarang akan muncul menu Users di sidebar.

Jika diklik user pada sidebar

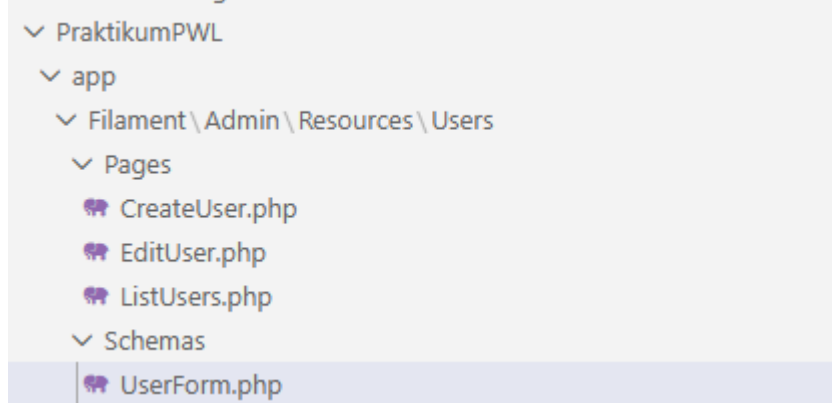

Jika diklik new user (blm ada form inputnya)

✦ D. Membuat Form Input (Create & Edit)

Buka file:

- UserForm.php

Modifikasi dan Tambahkan field berikut:

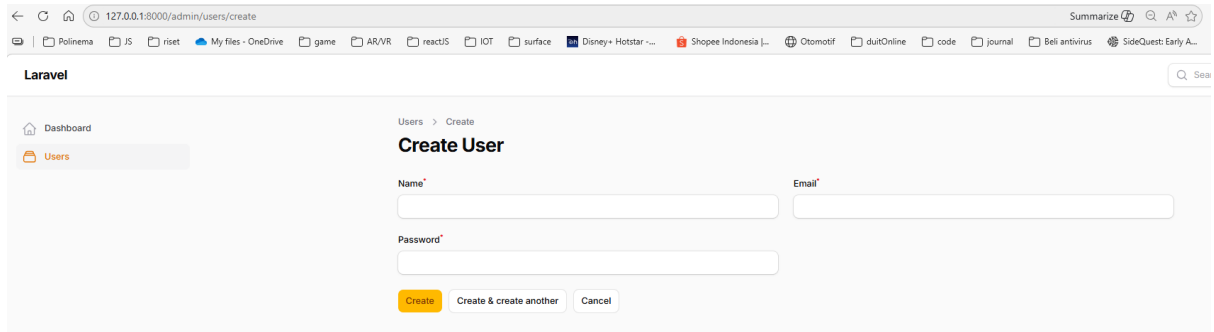

PraktikumPWL > app > Filament > Admin > Resources > Users > Schemas > UserForm.php

```
1  <?php
2
3  namespace App\Filament\Admin\Resources\Users\Schemas;
4
5  use Filament\Schemas\Schema;
6  use Filament\Forms\Components\TextInput;
7
8  class UserForm
9  {
10     public static function configure(Schema $schema): Schema
11     {
12         return $schema
13             ->components([
14                 //
15                 TextInput::make('name')
16                     ->required()
17                     ->maxLength(255),
18                 TextInput::make('email')
19                     ->email()
20                     ->required()
21                     ->maxLength(255),
22                 TextInput::make('password')
23                     ->password()
24                     ->required()
25             ]);
26     }
27 }
28
```

Refresh browser.

Hasil:

- Form Create User memiliki input Name, Email, Password
- Password otomatis terenkripsi oleh Laravel

Users > Create

Create User

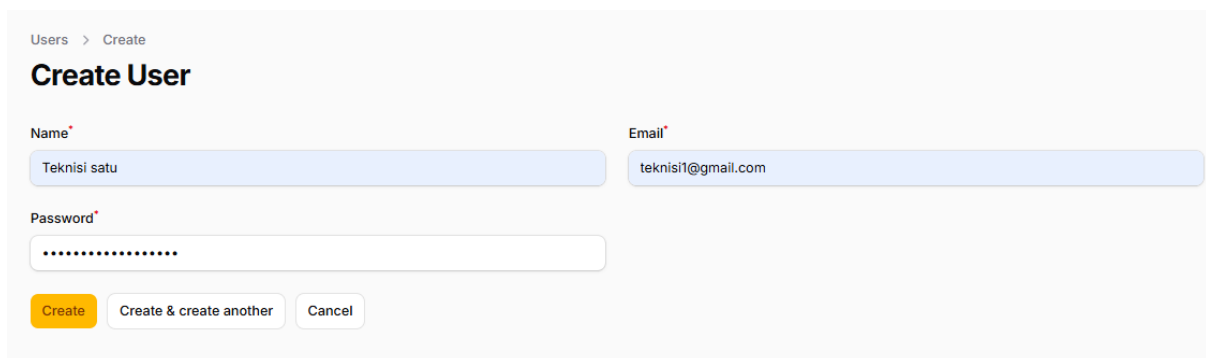

Name*

Email*

Password*

Create Create & create another Cancel

Coba diinputkan

Users > Create

Create User

Name*

Teknisi satu

Email*

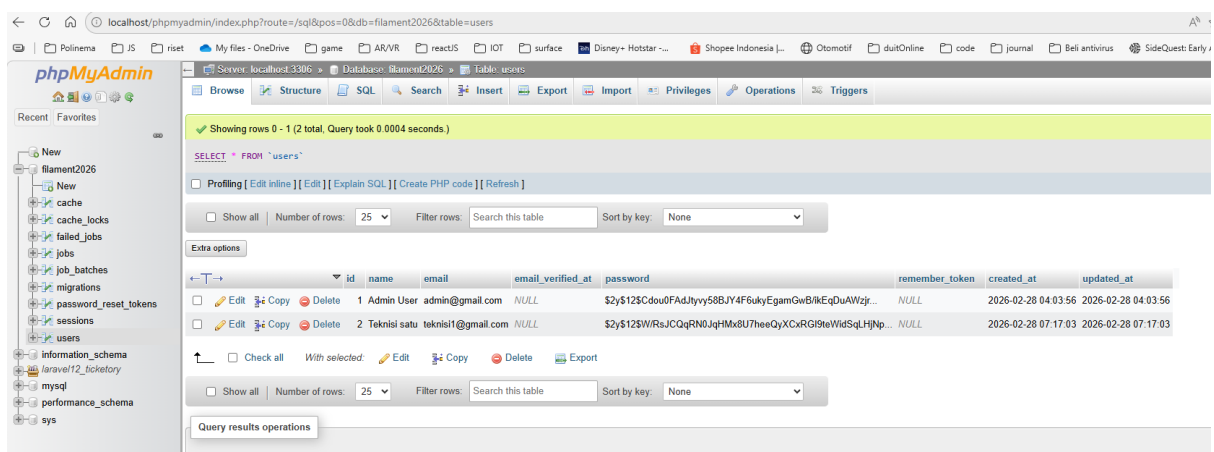

teknisi1@gmail.com

Password*

.....

Create Create & create another Cancel

Cek pada DB

Showing rows 0 - 1 (2 total. Query took 0.0004 seconds)

```
SELECT * FROM `users`
```

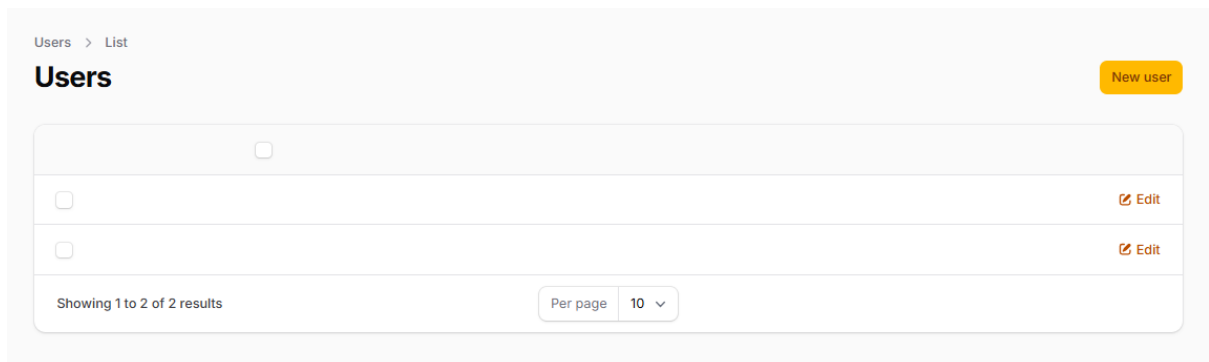

Profiling [Edit inline] [Edit] [Explain SQL] [Create PHP code] [Refresh]

Show all Number of rows: 25 Filter rows: Search this table Sort by key: None

	id	name	email	email_verified_at	password	remember_token	created_at	updated_at
☐	1	Admin User	admin@gmail.com	NULL	\$2y\$12\$Cdou0FAdJtyy58BJY4F6ukyEgamGwBkEqDuAWzr...	NULL	2026-02-28 04:03:56	2026-02-28 04:03:56
☐	2	Teknisi satu	teknisi1@gmail.com	NULL	\$2y\$12\$W/RsJCqRNOJqHMx8U7heeQyXCxRGi9teWidSqlHjNp...	NULL	2026-02-28 07:17:03	2026-02-28 07:17:03

Query results operations

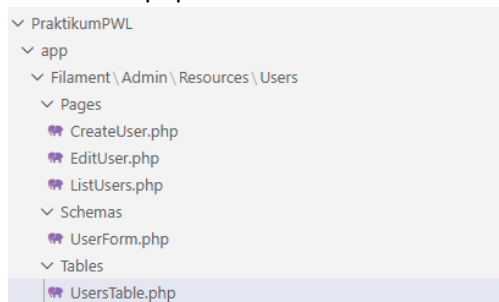

Saat Kembali ke halaman utama data tidak dapat ditampilkan

E. Menampilkan Data pada Tabel

Buka file:

- UsersTable.php

Tambahkan kolom:

```
PraktikumPWL > app > Filament > Admin > Resources > Users > Tables > UsersTable.php
1  <?php
2
3  namespace App\Filament\Admin\Resources\Users\Tables;
4
5  use Filament\Actions\BulkActionGroup;
6  use Filament\Actions\DeleteBulkAction;
7  use Filament\Actions>EditAction;
8  use Filament\Tables\Tables;
9  use Filament\Tables\Columns\TextColumn;
10
11 class UsersTable
12 {
13     public static function configure(Table $table): Table
14     {
15         return $table
16             ->columns([
17                 //
18                 TextColumn::make('name')->searchable()->sortable(),
19                 TextColumn::make('email')->searchable()->sortable(),
20             ])
21             ->filters([
22                 //
23             ])
24             ->recordActions([
25                 EditAction::make(),
26             ])
27             ->toolbarActions([
28                 BulkActionGroup::make([
29                     DeleteBulkAction::make(),
30                 ]),
31             ]);
32     }
33 }
34
```

Refresh browser.

Sekarang halaman list menampilkan:

- Nama
- Email
- Tombol Edit
- Tombol Delete

✦ G. Mengganti Icon Menu Resource

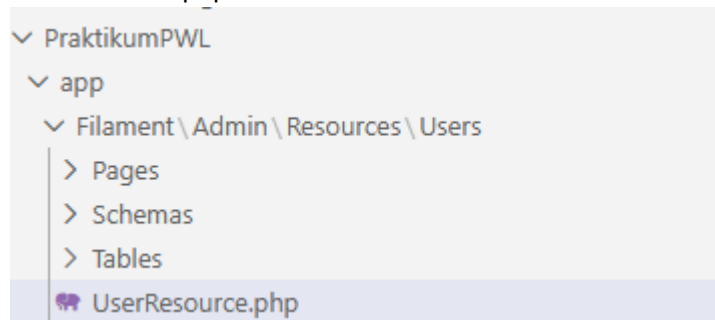

Filament menggunakan Heroicons sebagai icon default.

Website resmi: Heroicons

Buka file:

- UserResource.php

Ubah property icon:

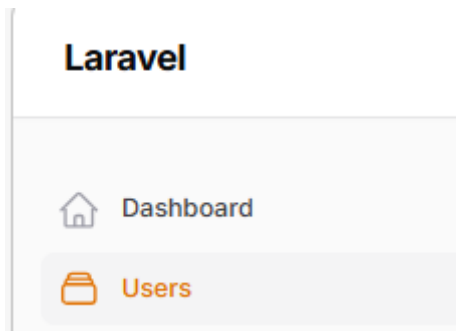

- `protected static string|BackedEnum|null $navigationIcon = Heroicon::UserGroup;`

PraktikumPWL > app > Filament > Admin > Resources > Users > UserResource.php

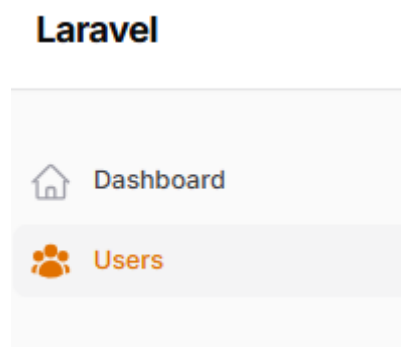

```
1  <?php
2
3  namespace App\Filament\Admin\Resources\Users;
4
5  use App\Filament\Admin\Resources\Users\Pages\CreateUser;
6  use App\Filament\Admin\Resources\Users\Pages>EditUser;
7  use App\Filament\Admin\Resources\Users\Pages\ListUsers;
8  use App\Filament\Admin\Resources\Users\Schemas\UserForm;
9  use App\Filament\Admin\Resources\Users\Tables\UsersTable;
10 use App\Models\User;
11 use BackedEnum;
12 use Filament\Resources\Resource;
13 use Filament\Schemas\Schema;
14 use Filament\Support\Icons\Heroicon;
15 use Filament\Tables\Table;
16
17 class UserResource extends Resource
18 {
19     protected static ?string $model = User::class;
20
21     // protected static string|BackedEnum|null $navigationIcon = Heroicon::OutlinedRectangleStack;
22     protected static string|BackedEnum|null $navigationIcon = Heroicon::UserGroup;
```

Refresh browser → Icon berubah.

- Sebelum

- Sesudah

✦ H. Hasil yang Diharapkan

Mahasiswa berhasil:

- ✓ Membuat CRUD User
- ✓ Menambahkan field form
- ✓ Menampilkan kolom pada tabel
- ✓ Mengedit dan menghapus data
- ✓ Mengubah icon resource

✦ I. Analisis & Diskusi

1. Mengapa Filament dapat membuat CRUD tanpa banyak coding?
 2. Apa perbedaan Form Schema dan Table Schema?
 3. Bagaimana jika kita ingin menambahkan validasi email unik?
 4. Mengapa password tidak perlu kita hash manual?
-

J. Tugas Praktikum

1. Tambahkan validasi:
 - Email harus unik
 - Password minimal 6 karakter
 2. Tambahkan kolom baru pada tabel:
 - Created_at
 3. Ganti icon dengan icon lain dari Heroicons
 4. Buat laporan berisi:
 - Screenshot halaman List
 - Screenshot halaman Create
 - Screenshot database
-

K. Kesimpulan

Pada pertemuan ini mahasiswa telah mempelajari:

- Konsep Resource pada Filament
 - Pembuatan CRUD otomatis
 - Penggunaan Form Builder
 - Penggunaan Table Builder
 - Kustomisasi icon
-
