

JOBSHEET PRAKTIKUM

Mata Kuliah: Pemrograman Web Lanjut

Pertemuan 9 – Implementasi Tabs pada Info List di Filament

Capaian Pembelajaran

Setelah mengikuti praktikum ini, mahasiswa mampu:

1. Menggunakan komponen Tabs pada Info List
2. Mengelompokkan informasi detail ke dalam beberapa tab
3. Menambahkan icon dan badge pada tab
4. Mengubah orientasi tab (horizontal & vertical)
5. Mendesain halaman View agar lebih ringkas dan user-friendly

Framework yang digunakan:

Filament

A. Latar Belakang

Pada pertemuan sebelumnya, kita telah menggunakan Info List untuk menampilkan detail Product.

Namun jika data cukup banyak, pengguna harus scroll panjang ke bawah.

Solusi: gunakan Tabs agar informasi dibagi menjadi beberapa kategori dan dapat diakses dengan klik.

Contoh pembagian:

- Tab 1 → Product Info
 - Tab 2 → Pricing & Stock
 - Tab 3 → Media & Status
-

B. Konsep Tabs di Info List

Tabs digunakan untuk:

- Membagi informasi ke dalam beberapa halaman kecil
 - Mengurangi scrolling panjang
 - Meningkatkan user experience
-

C. Mengubah Section Menjadi Tabs

Buka file:

- **ProductInfolist.php**

Ganti struktur Section menjadi Tabs.

D. Implementasi Tabs

◆ **1** Tab Product Info

```
Tabs::make('Product Tabs')
->tabs([
    Tabs\Tab::make('Product Info')
        ->icon('heroicon-o-academic-cap')
        ->schema([
            TextEntry::make('name')
                ->label('Product Name')
                ->weight('bold')
                ->color('primary'),

            TextEntry::make('sku')
                ->label('SKU')
                ->badge()
                ->color('success'),

            TextEntry::make('description')
                ->label('Description'),
        ])
    ->columnSpanFull(),
```

```

4
5 use Filament\Schemas\Components\Section;
6 use Filament\Infolists\Components\TextEntry;
7 use Filament\Infolists\Components\ImageEntry;
8 use Filament\Infolists\Components\IconEntry;
9 use Filament\Schemas\Components\Tabs;
10 use Filament\Schemas\Components\Tabs\Tab;
11 use Filament\Schemas\Schema;
12
13 class ProductInfolist
14 {
15     public static function configure(Schema $schema): Schema
16     {
17         return $schema
18             ->components([
19                 //
20                 Tabs::make('Product Tabs')
21                     ->tabs([
22                         Tab::make('Product Details')
23                             ->schema([
24                                 TextEntry::make('name')
25                                     ->label('Product Name')
26                                     ->weight('bold')
27                                     ->color('primary'),
28                                 TextEntry::make('id')
29                                     ->label('Product ID'),
30                                 TextEntry::make('sku')
31                                     ->label('Product SKU')
32                                     ->badge()
33                                     ->color('success'),
34                                 TextEntry::make('description')
35                                     ->label('Product Description'),
36                                 TextEntry::make('created_at')
37                                     ->label('Product Creation Date')
38                                     ->date('d M Y')
39                                     ->color('info'),
40                             ]),
41                 ]),
42             ->columnSpanFull(),
43         Section::make('Product Info') ...
44         ->columnSpanFull(),
45         Section::make('Product Price and Stock') ...
46         ->columnSpanFull(),
47         Section::make('Image and Status') ...
48         ->columnSpanFull(),
49     ]);
50 }

```

F. Mengubah Tabs Menjadi Vertical

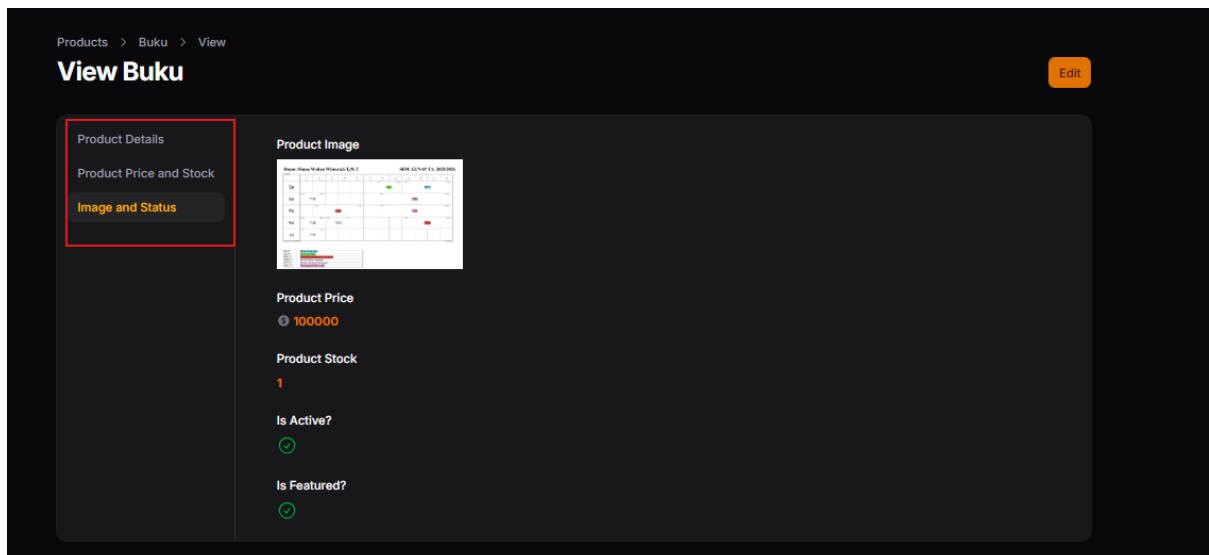

Tambahkan method:

- `->vertical()`

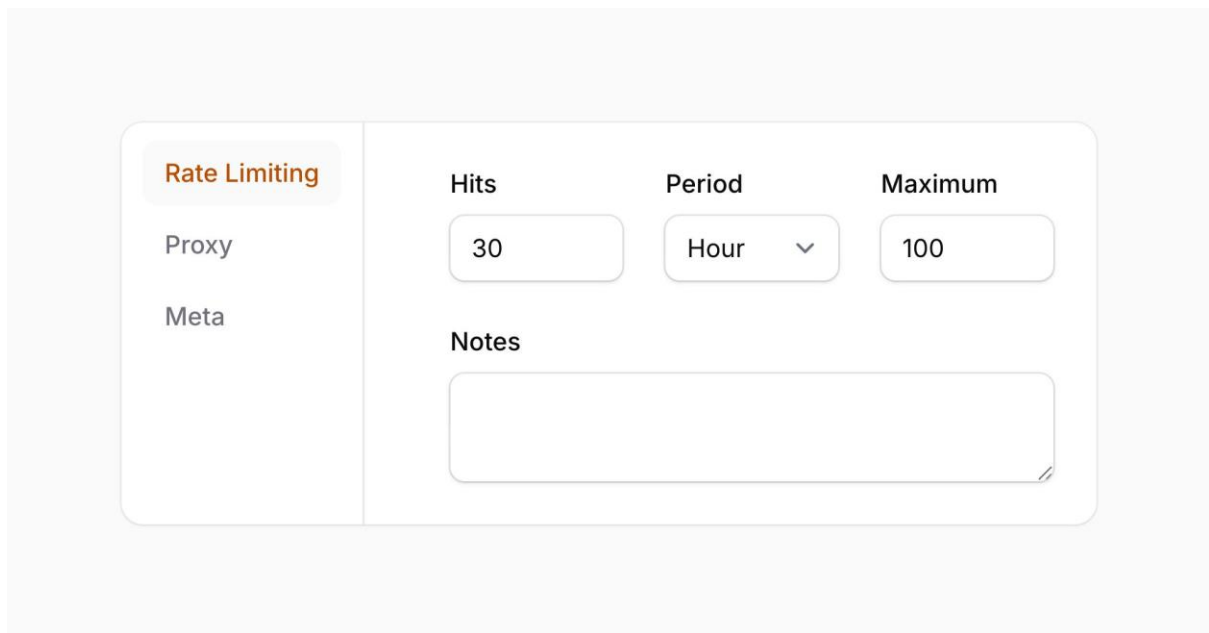

Contoh:

- `Tabs::make('Product Tabs')`
`->vertical()`

```
PraktikumPWL > app > Filament > Admin > Resources > Products > Schemas > ProductInfolist.php > ...
13 class ProductInfolist
15     public static function configure(Schema $schema): Schema
16     {
17         return $schema
18             ->components([
19             //
20             Tabs::make('Product Tabs')
21             ->tabs([
22             > Tab::make('Product Details') ...
23             > Tab::make('Product Price and Stock') ...
24             > Tab::make('Image and Status') ...
25             ->schema([
26             > ImageEntry::make('image')
27             > label('Product Image')
28             > disk('public'),
29             > TextEntry::make('price')
30             > label('Product Price')
31             > weight('bold')
32             > color('primary'),
33             > icon('heroicon-s-currency-dollar'),
34             > TextEntry::make('stock')
35             > label('Product Stock')
36             > weight('bold')
37             > color('primary'),
38             > IconEntry::make('is_active')
39             > label('Is Active?')
40             > boolean(),
41             > IconEntry::make('is_featured')
42             > label('Is Featured?')
43             > boolean(),
44             ])]
45             ->columnSpanFull()
46             ->vertical(),
47             > Section::make('Product Info') ...
48             > columnSpanFull(),
49             > Section::make('Product Price and Stock') ...
50             > columnSpanFull(),
51             > Section::make('Image and Status') ...
52             > columnSpanFull(),
53             ])]
54     });
55 }
```

G. Fitur Tambahan Tabs

Method	Fungsi
icon()	Menambahkan icon pada tab
badge()	Menambahkan badge angka

Method	Fungsi
badgeColor()	Mengubah warna badge
columnSpanFull()	Membuat full width
vertical()	Mengubah orientasi tab

✦ H. Perbandingan Section vs Tabs

Section	Tabs
Scroll panjang	Navigasi klik
Semua tampil sekaligus	Terpisah per kategori
Kurang ringkas	Lebih profesional

✦ I. Hasil yang Diharapkan

Mahasiswa berhasil:

- ✓ Mengganti Section menjadi Tabs
- ✓ Membuat 3 Tab berbeda
- ✓ Menambahkan icon pada Tab
- ✓ Menambahkan badge
- ✓ Mengubah orientasi ke vertical

✦ J. Latihan Praktikum

1. Tambahkan badge dinamis berdasarkan jumlah stok
2. Tambahkan warna badge berbeda
3. Ubah tampilan menjadi vertical
4. Tambahkan icon berbeda pada tiap tab
5. Screenshot:
 - Tabs horizontal
 - Tabs vertical
 - Tab dengan badge

✦ K. Analisis & Diskusi

1. Kapan kita menggunakan Tabs dibanding Section?
 2. Apa kelebihan Tabs untuk data panjang?
 3. Apakah Tabs bisa digunakan pada Form juga?
 4. Bagaimana jika tab terlalu banyak?
-

L. Kesimpulan

Pada pertemuan ini mahasiswa telah mempelajari:

- Penggunaan Tabs pada Info List
- Mengatur tampilan View Page menjadi lebih interaktif
- Menambahkan icon & badge
- Mengubah orientasi tampilan
